Beyond the limits: the new Faculty at Heidelberg University

The Faculty of Medicine, the Engineering, and the Quantum Sciences are part of the new Faculty. These new units will bring researchers in physics, mathematics, biology, and medicine together. The faculty also includes the Heidelberg University Hospital, the Heidelberg University School of Medicine, and the Heidelberg University School of Dental Medicine. The faculty covers both basic and applied research in a wide range of fields, including cancer biology, stem cell research, neurodegeneration, and infectious diseases. The faculty also houses the Heidelberg Institute for Theoretical Studies, which is a research institute for fundamental and applied sciences.

The new Faculty at Heidelberg University will be a major step towards the future of research and education in Germany. By bringing together researchers from different disciplines, the new Faculty will create new opportunities for interdisciplinary research and education. The new Faculty will also provide a platform for cutting-edge research and innovation in a range of fields, including medicine, engineering, and quantum sciences.
