The Klaus Tschira Guest Professorship

HITS Independent Postdoc

Antonis Rokas

The Klaus Tschira Guest Professorship

Antonis Rokas was one of the original 24 "highly cited" researchers selected in 2004. He arrived in June 2022 and stayed until the end of September. Antonis collaborated intensively with the computational side of evolutionary biology where many factors are to be considered. In one aspect, he has worked on a synthesis article on the evolution of the large bowel in vertebrates, which is highly cited. In another aspect, he has worked on a paper about the impact of a genetic software he and his group have developed. He has also collaborated with the Heidelberg region. The Klaus Tschira Guest Professorship is an excellent opportunity for the program of an international collaborative effort. For me, it has been a great experience, being part of this program and working with talented young scientists from around the world.

The program offers an independent Postdoc at HITS. The program also offers an advanced research stay (a total of 7 months in Europe) for a junior group leader. The position is open to all talented young scientists worldwide, according to this year's impact factor. For me, it has been a great experience, being part of this program and working with talented young scientists from around the world.

The program offers an independent Postdoc at HITS. The program also offers an advanced research stay (a total of 7 months in Europe) for a junior group leader. The position is open to all talented young scientists worldwide, according to this year's impact factor. For me, it has been a great experience, being part of this program and working with talented young scientists from around the world.

Research

The First HITS Independent Postdoc

Antonis Rokas is a junior group leader at HITS. The program offers an independent Postdoc at HITS. The program also offers an advanced research stay (a total of 7 months in Europe) for a junior group leader. The position is open to all talented young scientists worldwide, according to this year's impact factor. For me, it has been a great experience, being part of this program and working with talented young scientists from around the world.
